Hello,

The following submission has been created.

Track Name: Security & Privacy

Paper ID: 1067

Paper Title: Study of Machine Learning and Rule-Based Phishing Detection

Abstract:
– Currently, phishing attacks remain as one of the most likely and thus one of the more dangerous types of cybercrime, wherein attackers trick their victims into giving out sensitive information such as passwords, banking details and other personal information. The increase in Internet services has only increased the complexity of phishing techniques, highlighting the need for effective, reliable and flexible detection solutions. This paper describes and compares the design principles, performance characteristics and limitations of real-world phishing detection systems based on either a rules-based or a machine learning (ML)-based approach. Through a systematic review of the literature and a feature analysis that examined several different characteristics of phishing attacks including URL structure, email content, website behaviour and user interaction patterns we are able to analyse both systems performance based on detection accuracy, scalability and adaptability to new threats. Our analysis indicates that rules-based detection methods cannot generalise against novel forms of phishing attacks, even if they are relatively efficient and easy to understand. Furthermore, while ML detection models, especially ensemble and deep learning approaches, are significantly more accurate; they require large quantities of labelled training data and introduce computational complexity. Finally, we conclude that the most effective, scalable and practical way to detect phishing attacks in real-world situations will be to use a hybrid architecture that combines deterministic rules-based filters and adaptive ML classifiers.

Submission Questions Response:
1. Corresponding author Email ID
vinayak961.be22@chitkara.edu.in
2. Contact number with country code
+917347482540
3. Author's Information
Agreement accepted
4. Co-author's Consent
Agreement accepted
5. Certificate of Originality
Agreement accepted
6. Author's Consent
Agreement accepted
7. The use of artificial intelligence (AI)-generated text (e.g., by ChatGPT)
Agreement accepted

Thanks,
CMT team.
